***The Professional Certificate Course on Automation Testing
(Core Java plus Selenium)***

The Huge Career Scope in The Professional Certificate Course:

The scope of Selenium with Core Java Test engineer is very good and most companies (Web Development) have openings for Selenium with Core Java Test engineers, also looking at current developments and improvements in Selenium, The best comb Skill set in Core Java plus Selenium the demand will be on the rise for another decade.

In fact, a qualified automation engineer can draw much more salary than a developer with similar work experience (years). There is good scope of testing. As software is developed, it needs to be tested hence; there will always be demand for testing professionals. Selenium is an automation framework build around java Script. Better persist with a dev profile with Selenium as a plus.

An automation test engineer with skills in core java and selenium is needed to fulfill a specific task that doesn't need coding skills like that of a java developer, a more analytical approach is needed, similarly a java developer fits in more problem solving environment than design test cases for a application developed probably by the likes of him.

Shortage of Trained/Certified Professionals:

As software testing teams are responsible for making sure that everything adheres to the specifications of the software being developed, there is always increasing demand for **Certified Professional in Automation Testing**. IT giants, across globe, are looking for candidates **Experience in automating Web and Client Server applications**. **Experience in Selenium and Core java**, a mandatory with very good knowledge/ application on manual testing and QA process

Keeping in focus on the Emerging Job opportunities/also entrepreneurial opportunities, ELDF, has designed the Industry Matching *Professional Certificate course in Automation Testing*.
